

South Carolina Environmental Conference 2015

Planning for the Future

An Update on the Status of South Carolina's Surface Water Quantity Models

John Boyer, PE, BCEE

Presentation Outline

- Project Purpose, Schedule, and Approach
- The Modeling Tool
- Saluda River Basin Unimpaired Flows and Pilot Model
- Stakeholder Involvement Opportunities

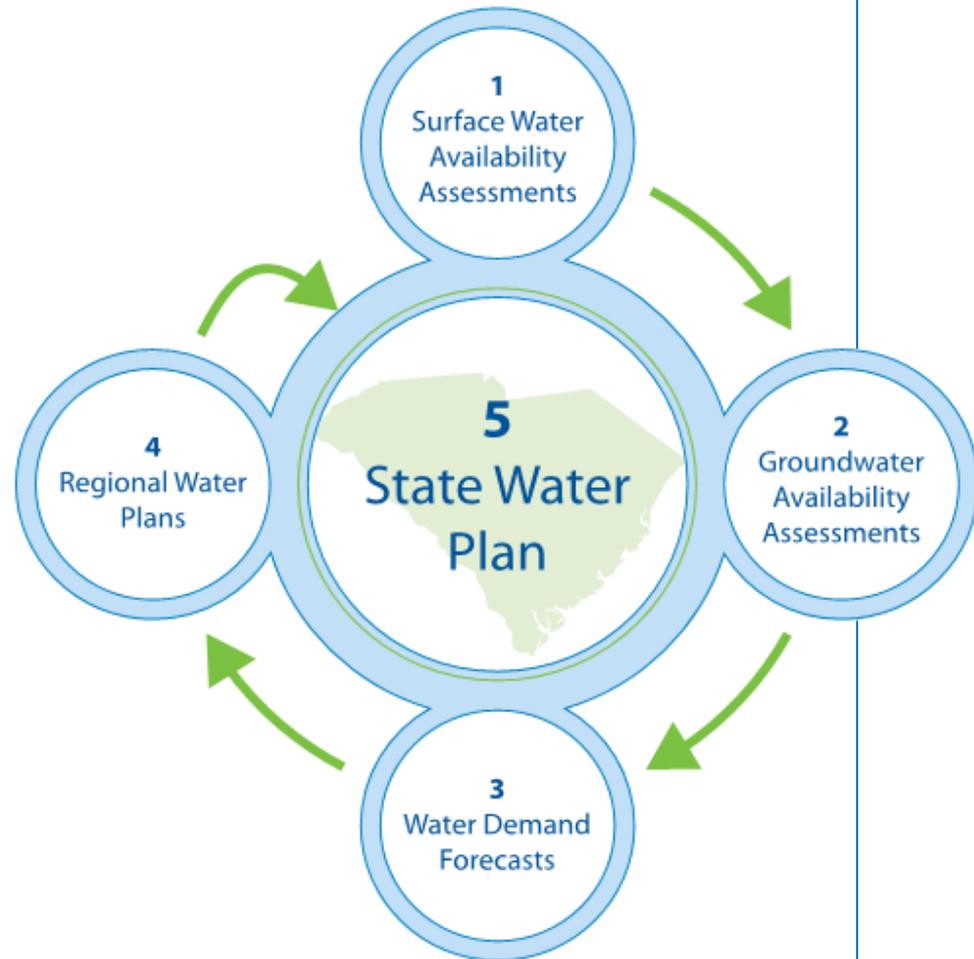

Project Purpose

- Build surface water quantity models capable of:
 - Accounting for inflows and outflows from a basin
 - Accurately simulating streamflows and reservoir levels over the historical inflow record
 - Conducting “What if” scenarios to evaluate future water demands, management strategies and system performance.
- The models will be made available for use by all stakeholders to assist with planning and management

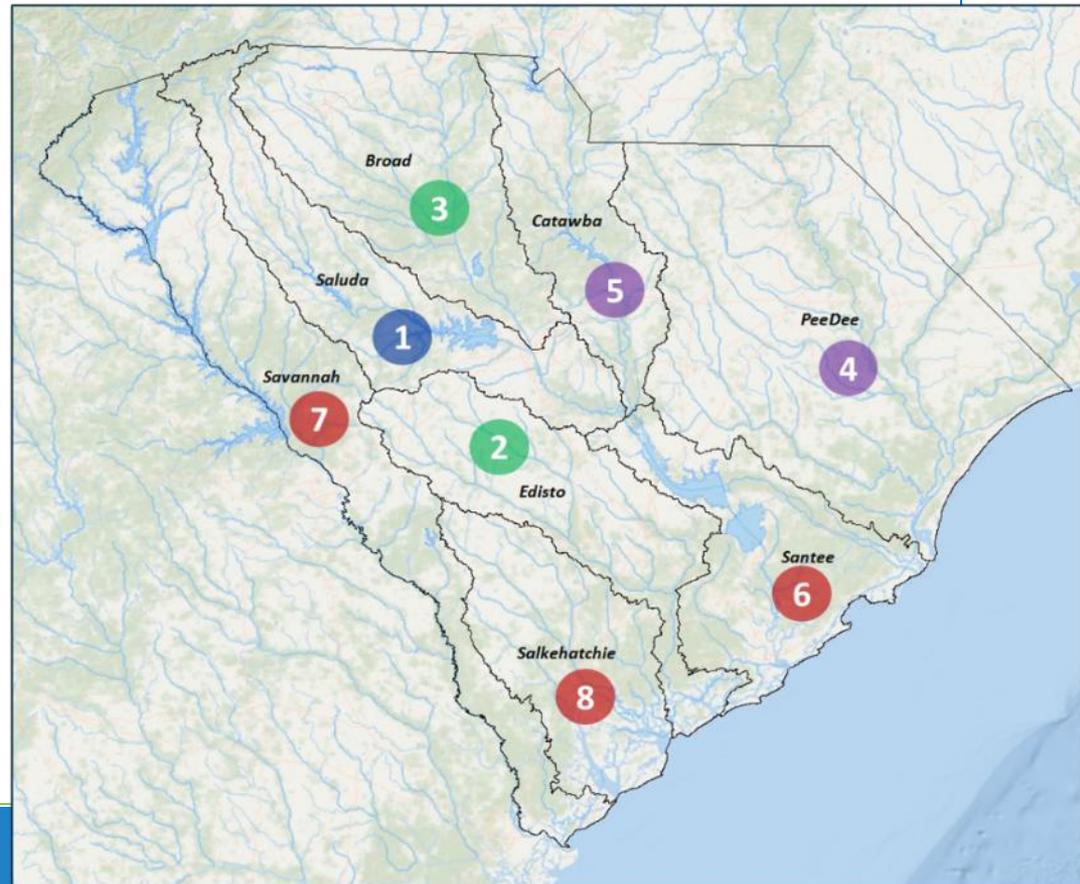

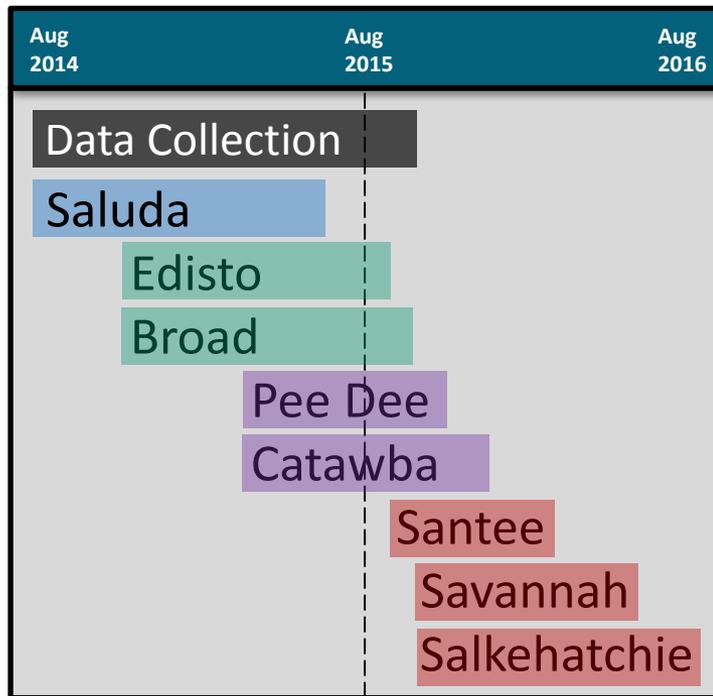

Project Purpose

- This phase of the State Water Plan development only involves baseline surface water model development
- The surface water models, and other available tools, will eventually be used to support development of regional water plans

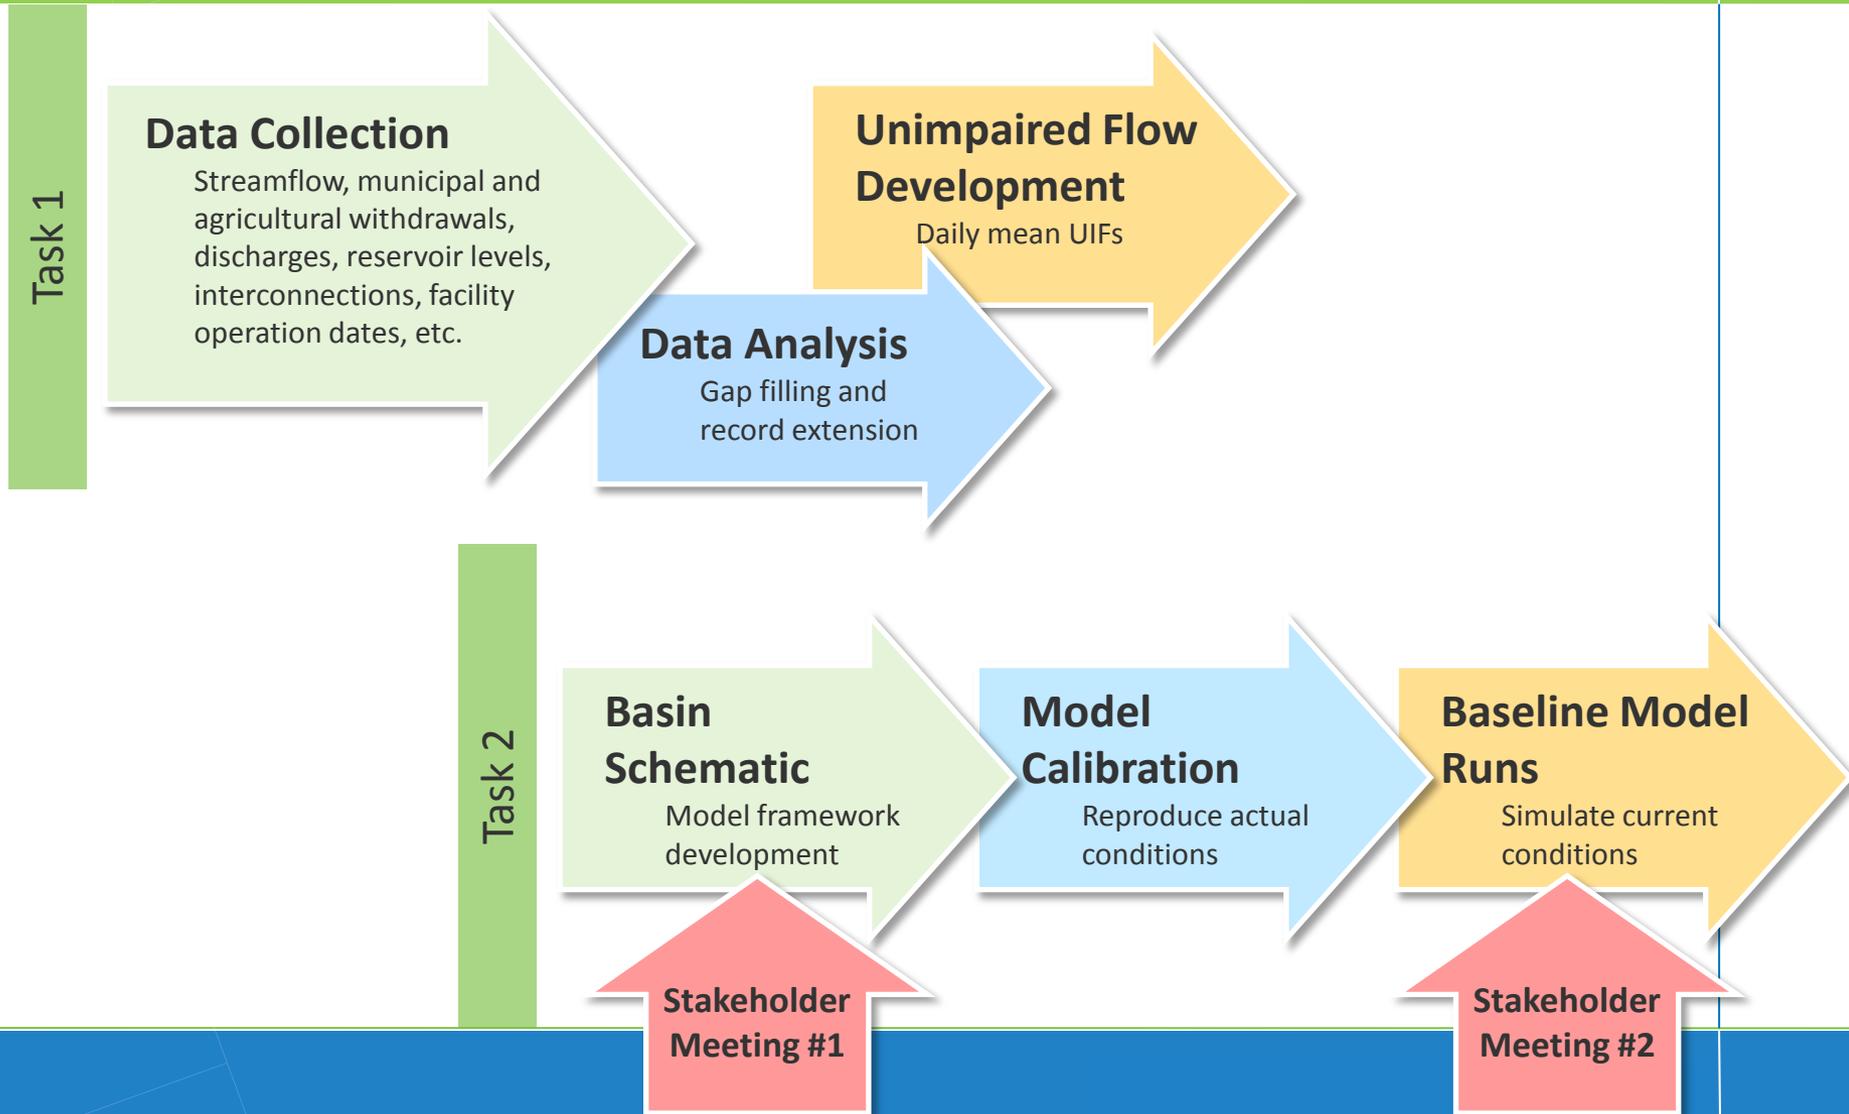

Schedule for Developing the Models

- Pilot Model of the Saluda River Basin is underway
- Groups of models will be constructed in parallel
- August 2016 Finish

Project Approach

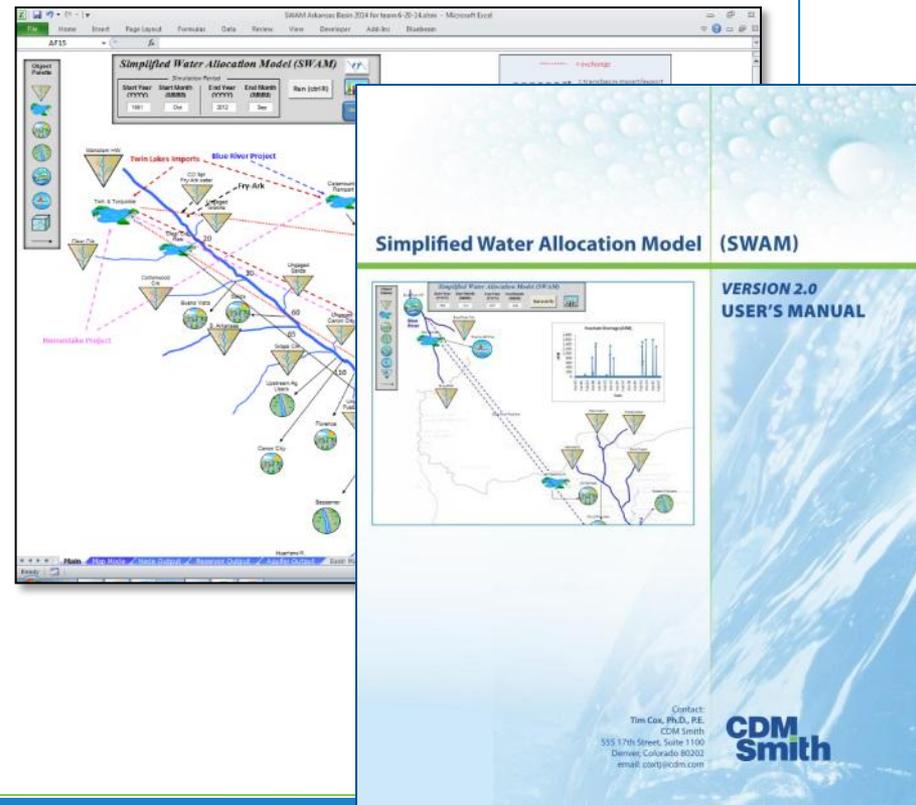

Presentation Outline

- Project Purpose, Overview and Schedule
- The Modeling Tool
- Saluda River Basin Unimpaired Flows and Pilot Model
- Stakeholder Involvement Opportunities

Simplified Water Allocation Model (SWAM)

- Developed in response to an increasing need for a desktop tool to facilitate regional and statewide water allocation analysis
- Calculates physically and legally available water, diversions, storage consumption and return flows at user-defined nodes
- Used to support large-scale planning studies in Colorado, Oklahoma, Arkansas and Texas

Simplified Water Allocation Model (SWAM)

Similarities between SWAM, OASIS, CHEOPS, and RiverWare:

- Used in major river basin studies and/or statewide water plans
- Operating Rules of varying complexity
- Monthly and Daily Timesteps
- Visual Depiction of the River Network

Unique Features:

SWAM

- Familiar and adaptable environment: Visual Basic and Spreadsheets
- Built in functions for reservoirs, river operations, discharges, irrigation, return flows, etc.

OASIS

- Built in Probability Analysis for Real-Time Ops
- Optimization toward objectives in each timestep

CHEOPS

- Tailored specifically for hydropower
 - Energy Calculations
 - Reservoir Tracking
- Familiar Visual Basic programming

RiverWare

- Fully linked graphical network development
- 3 modes:
 - Pure simulation
 - Rules-based simulation
 - Optimization

The Simplified Water Allocation Model is...

- a water accounting tool
- a WHAT-IF simulation model
- a network flow model that traces water through a natural stream network, simulating withdrawals, discharges, storage, and hydroelectric operations
- **not** precipitation-runoff model (e.g., HEC-HMS)
- **not** a hydraulic model (e.g. HEC-RAS)
- **not** a water quality model (e.g., QUAL2K)
- **not** an optimization model
- **not** a groundwater flow model (e.g., MODFLOW)

The Models Can Be Used To...

- Determine surface-water availability
- Predict where and when future water shortages would occur
- Test alternative water management strategies, new operating rules, and “what-if” scenarios
- Consolidate hydrologic data
- Evaluate the impacts of future withdrawals on instream flow needs
- Evaluate interbasin transfers
- Support development of Drought Management Plans
- Compare managed flows to natural flows

Simplified Water Allocation Model (SWAM)

- Object-oriented tool in which a river basin and all of its influences can be linked into a network with user defined priorities
- Resides within Microsoft Excel
- Point and click setup and output access

Input Forms

Agricultural Water User

Main | Source Water | Return Flows

User Name: Multiple Sources of Water ?

Supplemental Supply/Demand Alternatives

Transbasin Import Groundwater

Demands

user-defined ag calculations

Agricultural Water User

Main | Source Water | Return Flows

Return Flow Locations

single point multiple points

Receiving Stream: RF Location (mi) Time Lag (months)

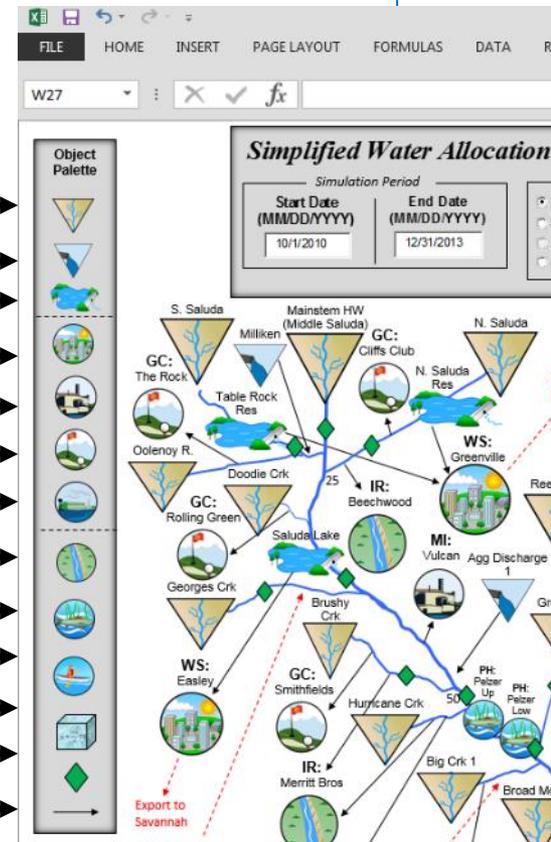

Monthly Return Flows

| Return Flow % | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
|---------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|

Calibration Result Graphs

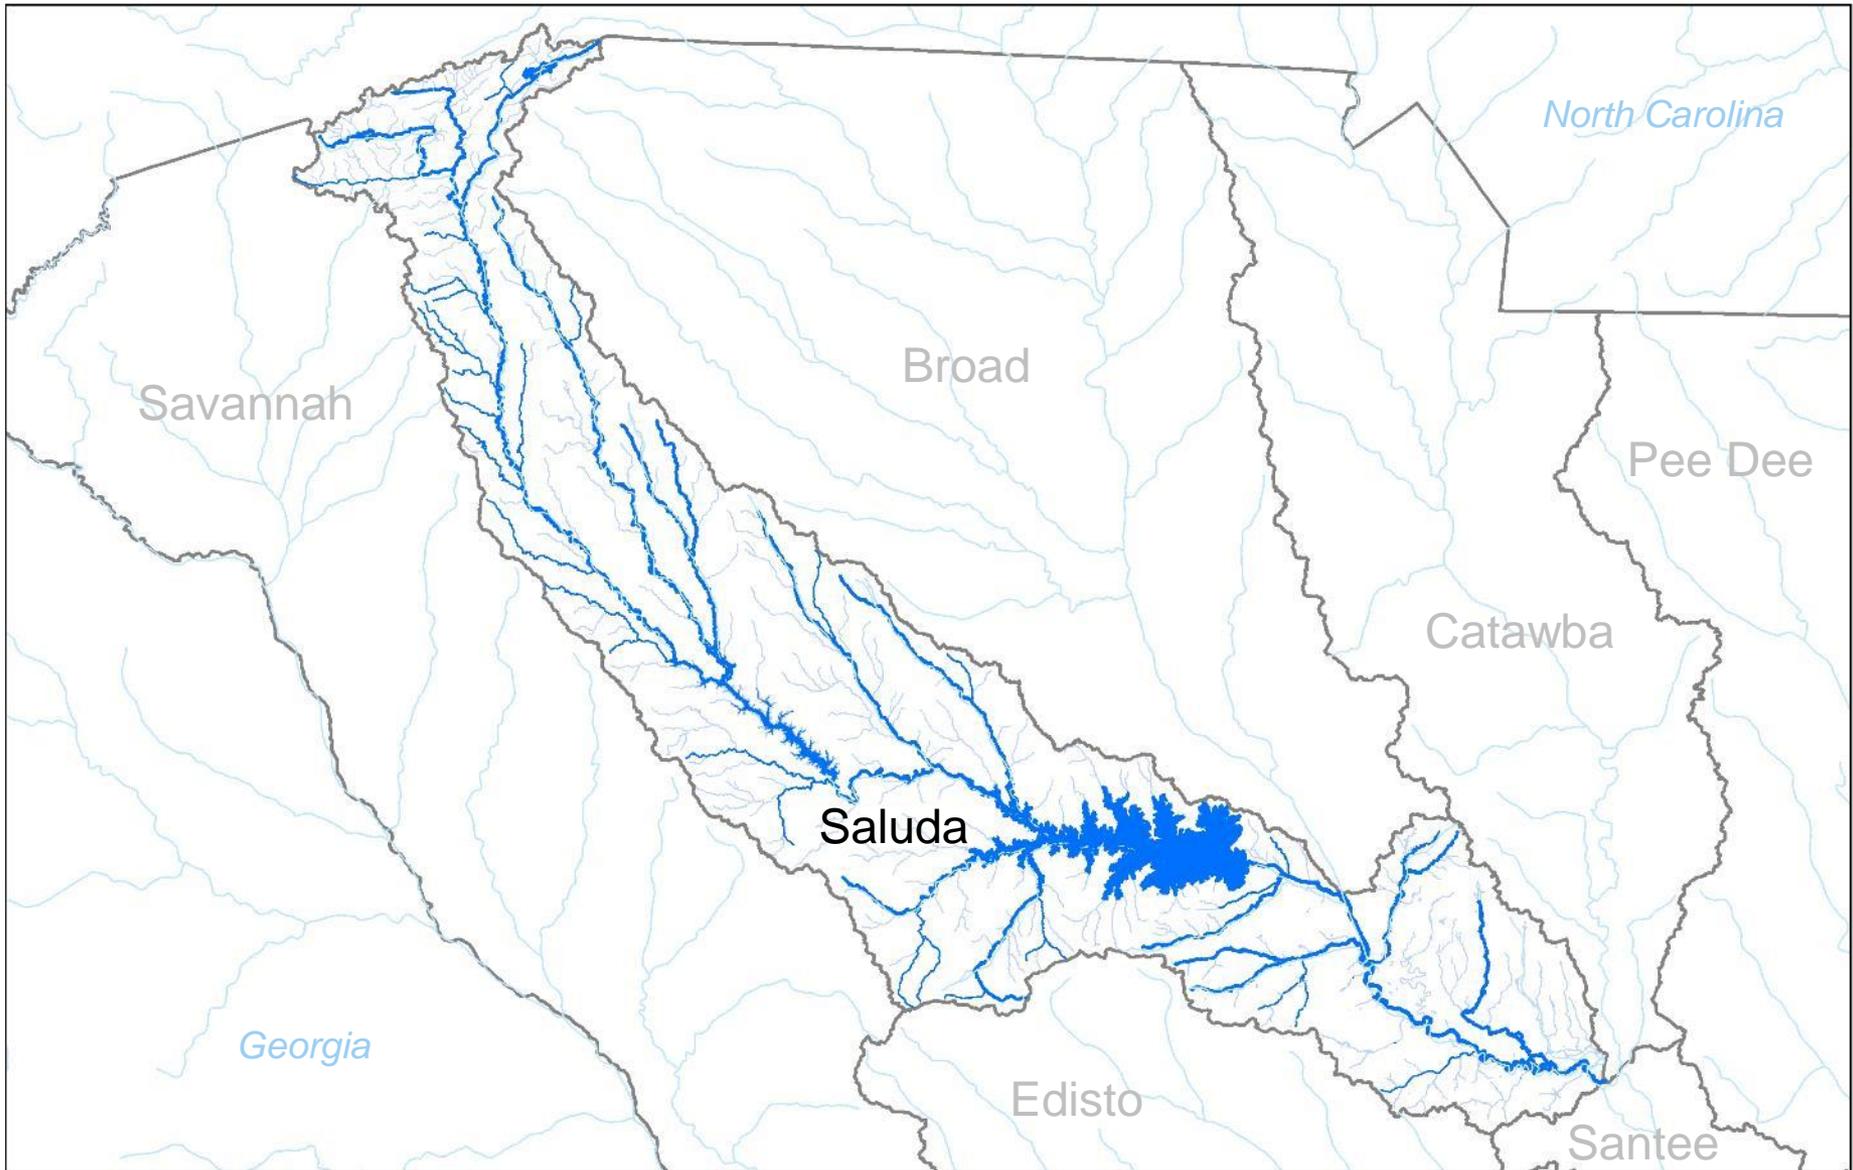

Presentation Outline

- Project Purpose, Overview and Schedule
- The Modeling Tool
- Saluda River Basin Unimpaired Flows and Pilot Model
- Stakeholder Involvement Opportunities

Saluda Basin Pilot Model

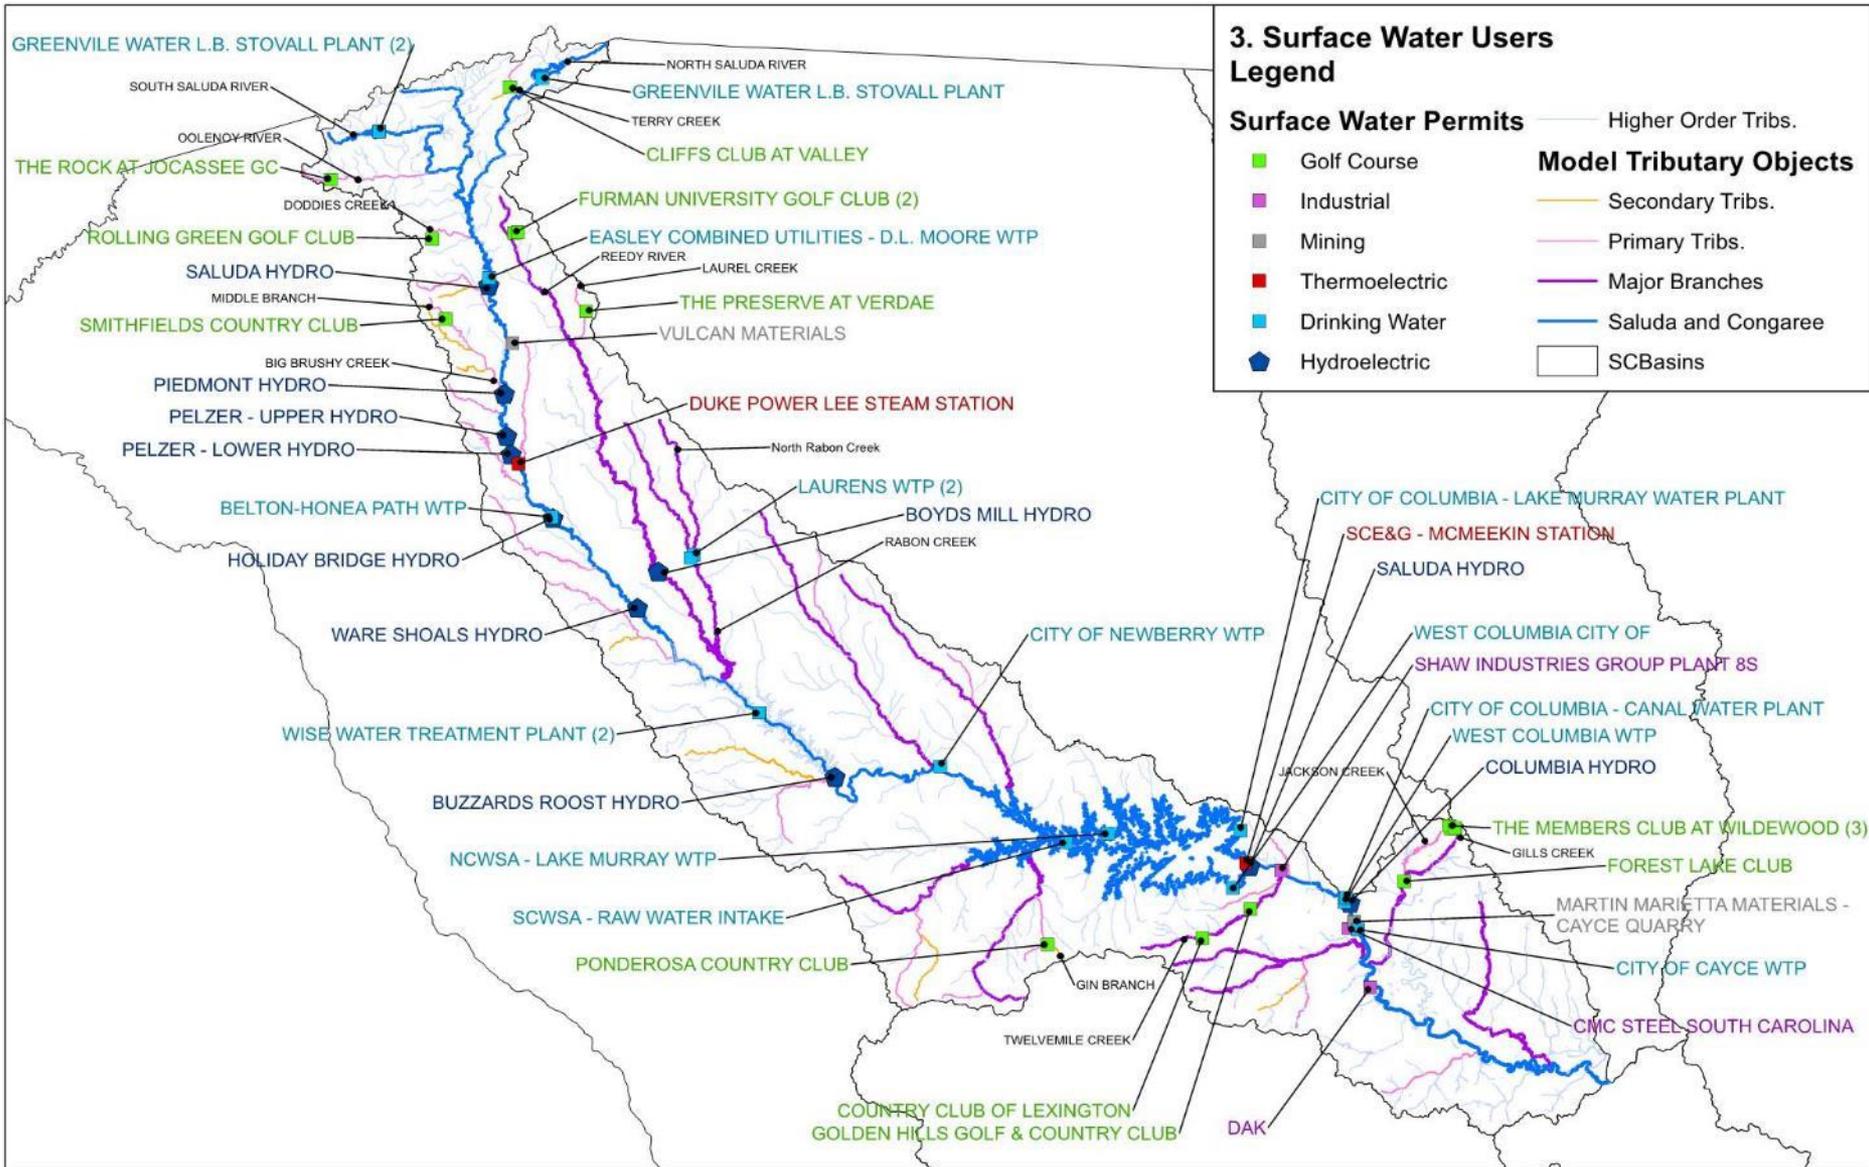

Status of the Saluda Basin Pilot Model

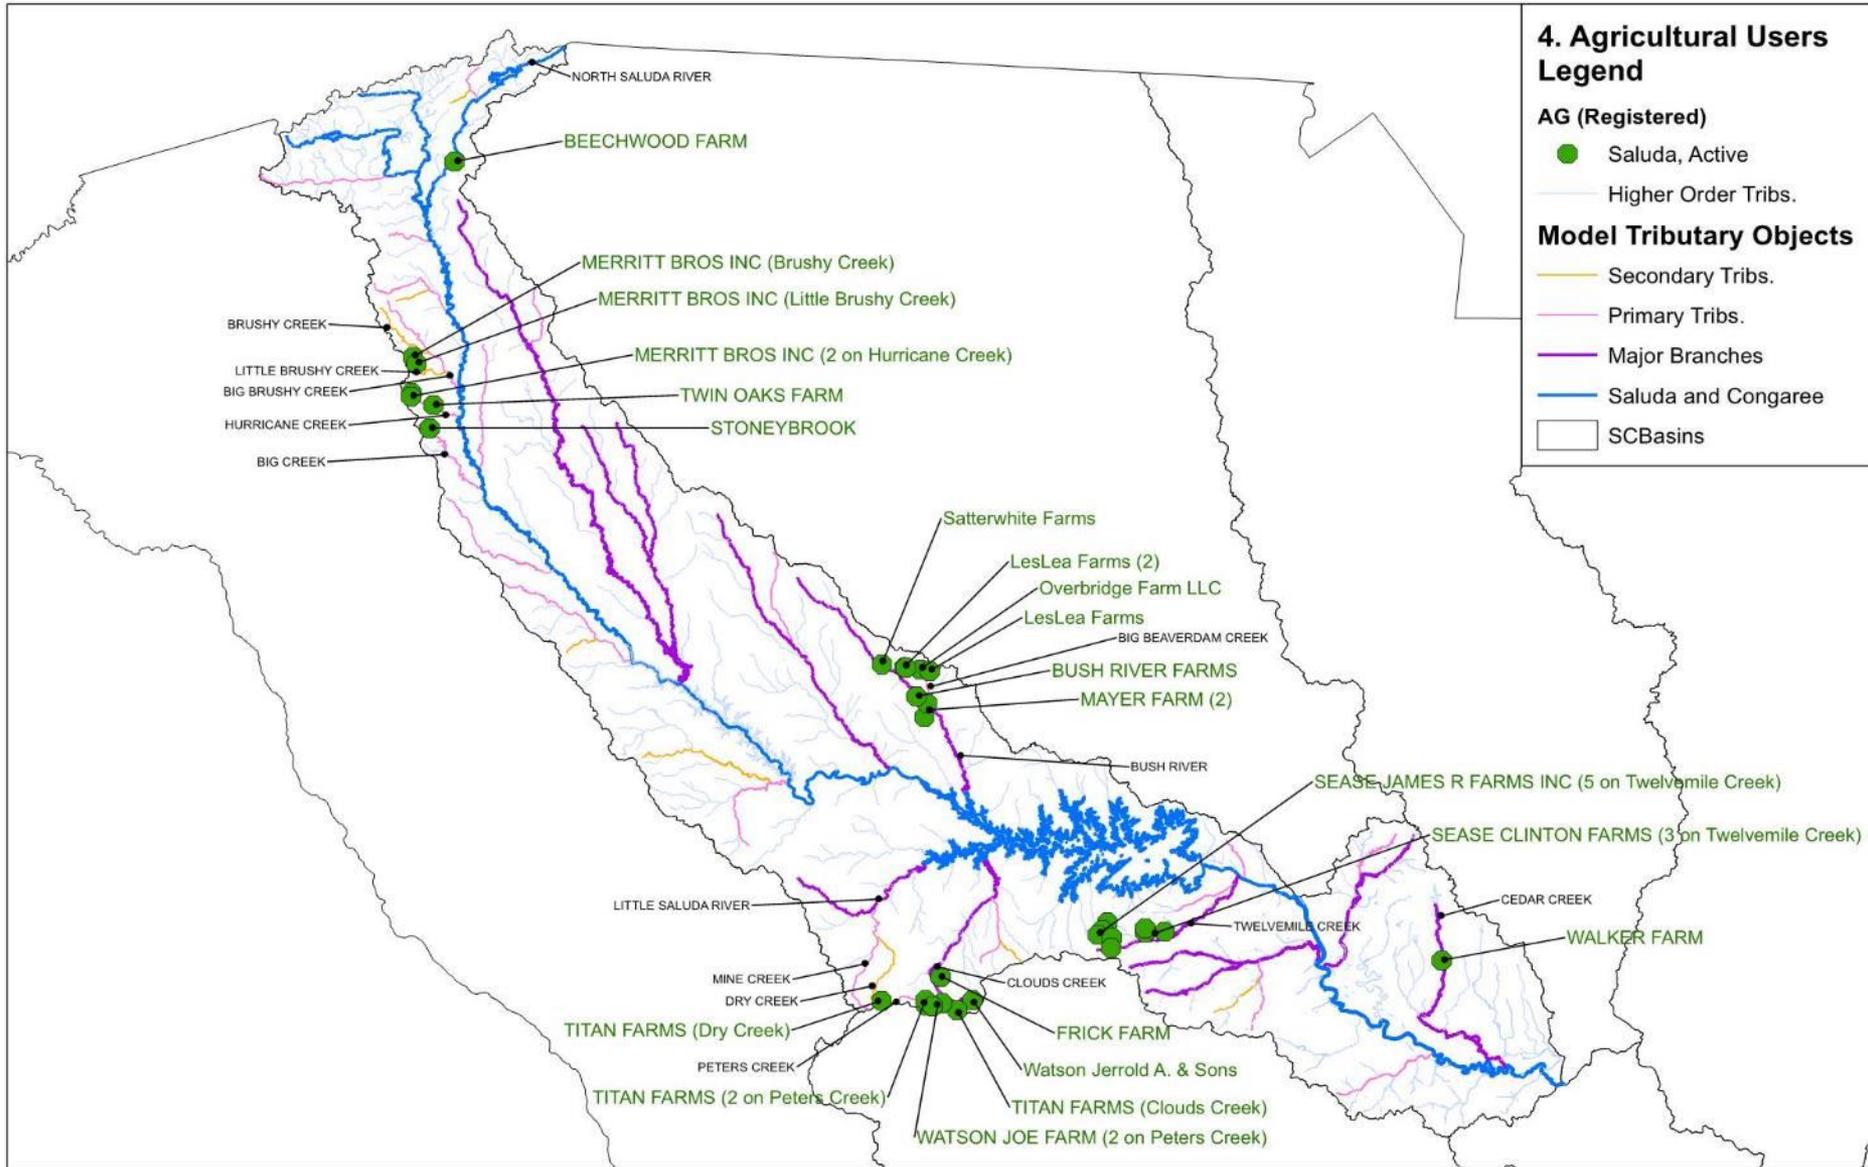

- Data Collection is complete
 - DHEC withdrawal records, 2001 – 2014 (some back to 1985)
 - NPDES discharge records, 1989 – 2014
 - Utility-provided historical records, estimates, and start dates
 - Instream flow requirements and minimum releases
 - Streamflow and lake levels
 - Evaporation and precipitation

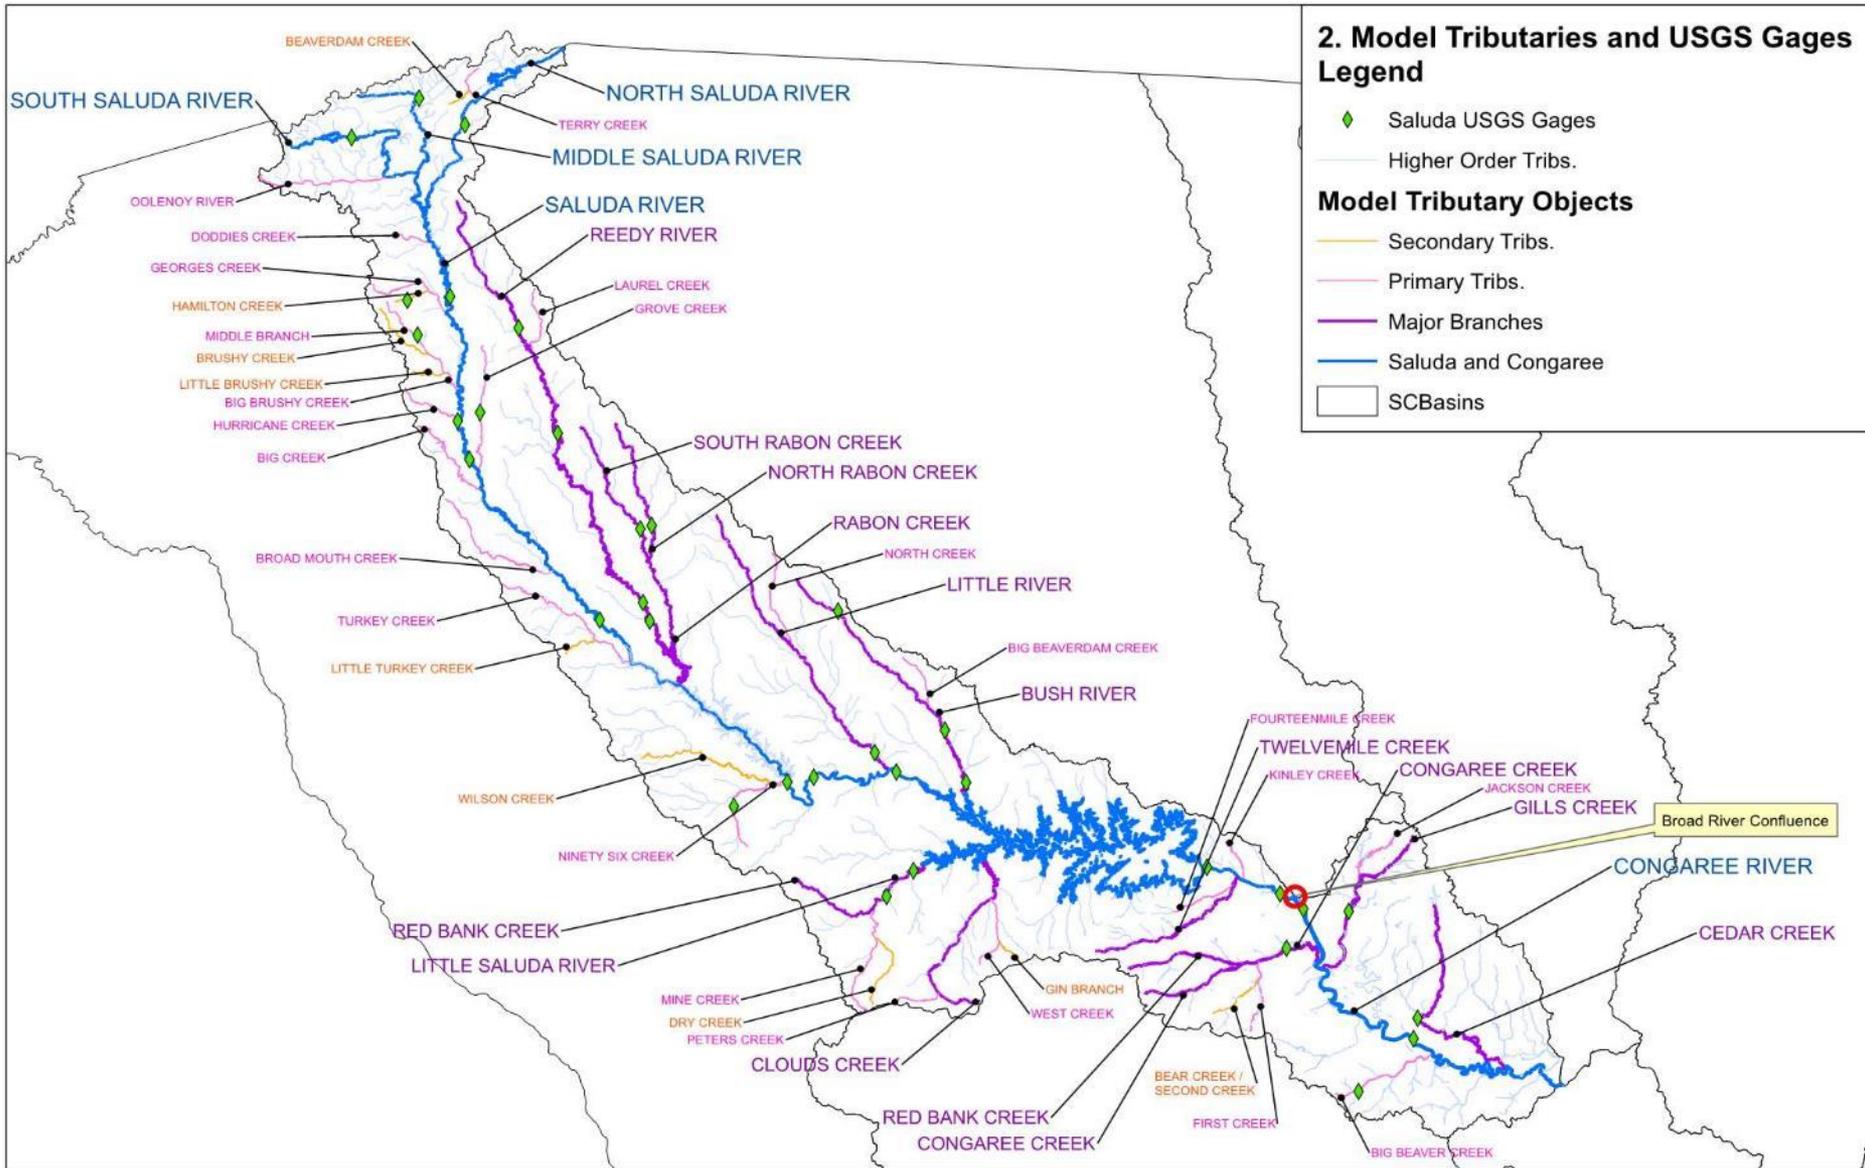

Saluda Basin – Permitted Users

Saluda Basin – Registered Users

Saluda Basin – Model Tributaries

Saluda Basin – Unimpaired Flow Dataset

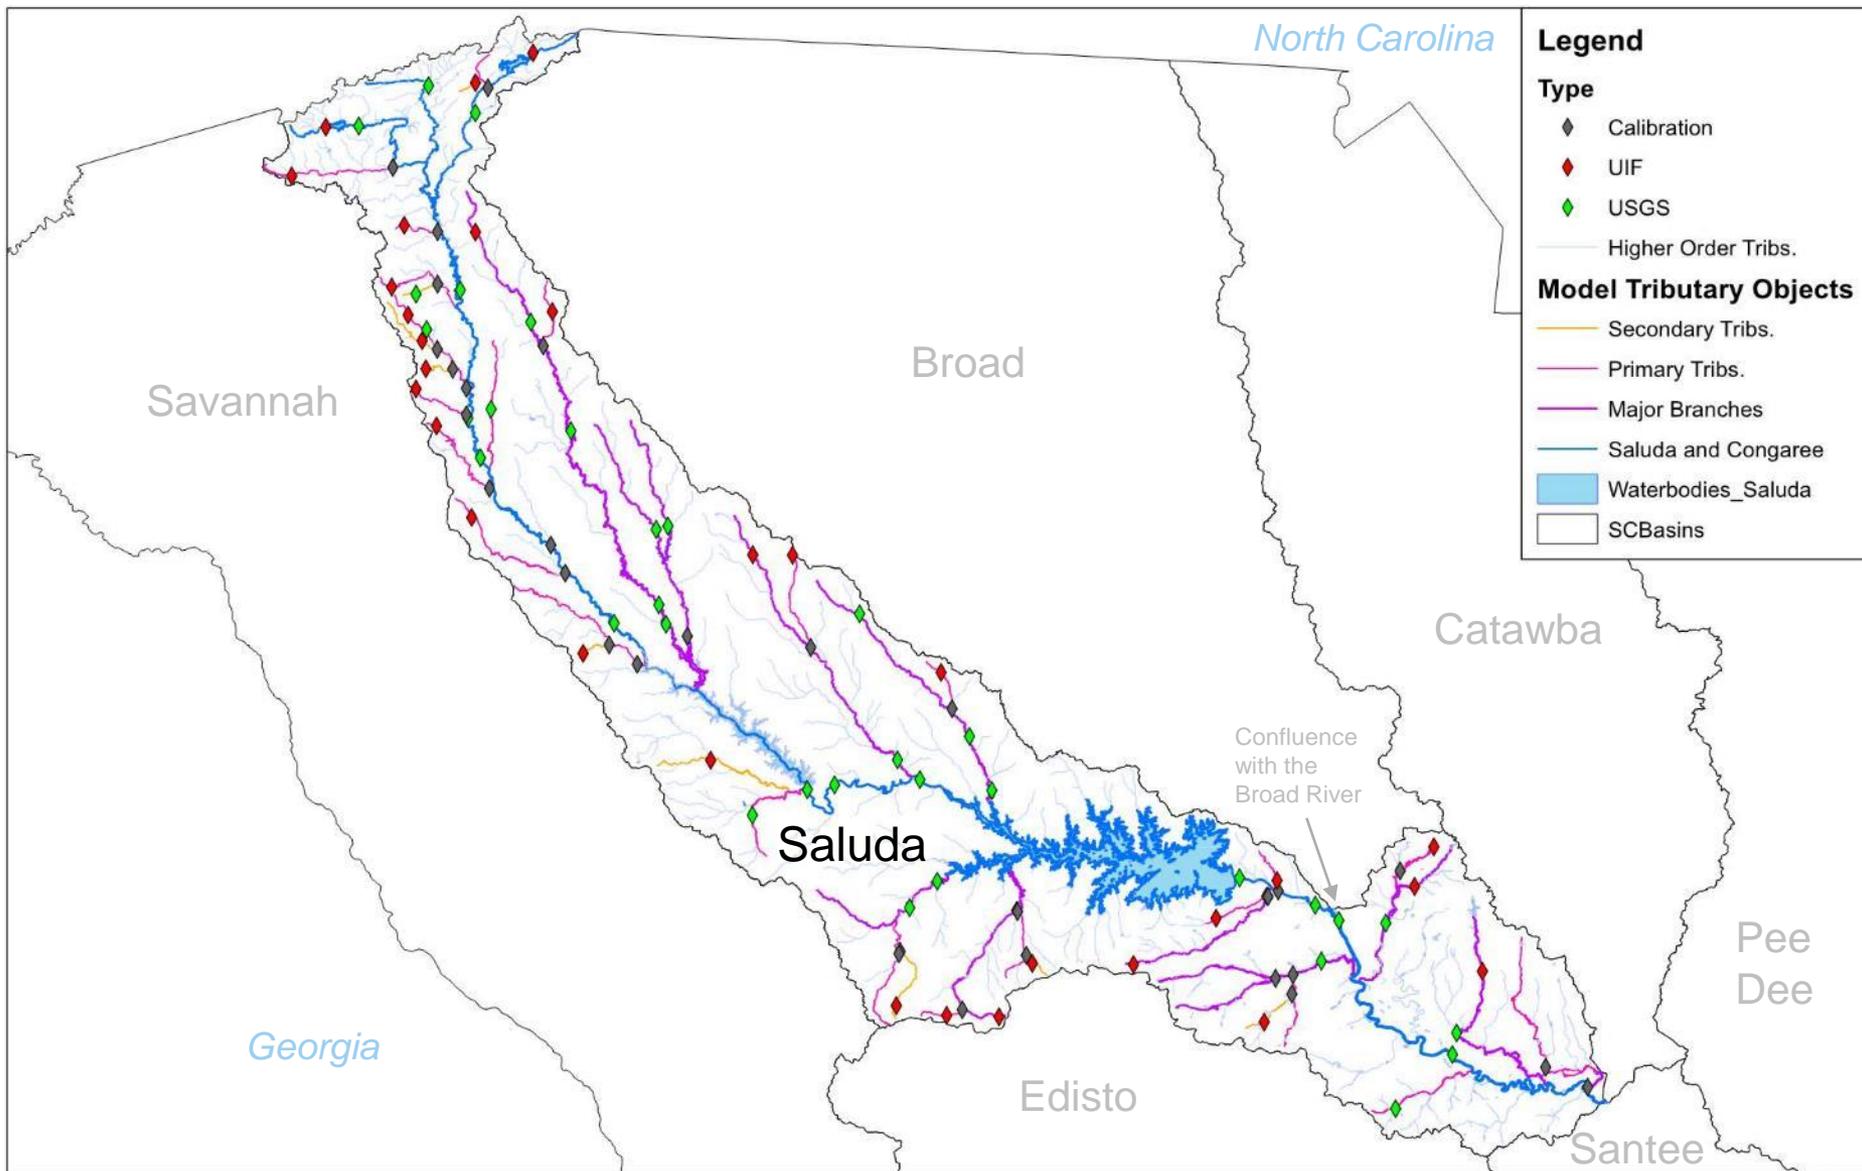

- Unimpaired Flows (UIFs) are being developed for the Saluda Basin up to the confluence with the Broad River
 - 1925 to 2014

UIF Definitions: - Flow in a river as it would be in a completely unaltered state
- Historically observed flows with human influences removed

UIFs Provide: - A baseline for evaluating impacts of human use by allowing analysts to compare altered flows to UIFs

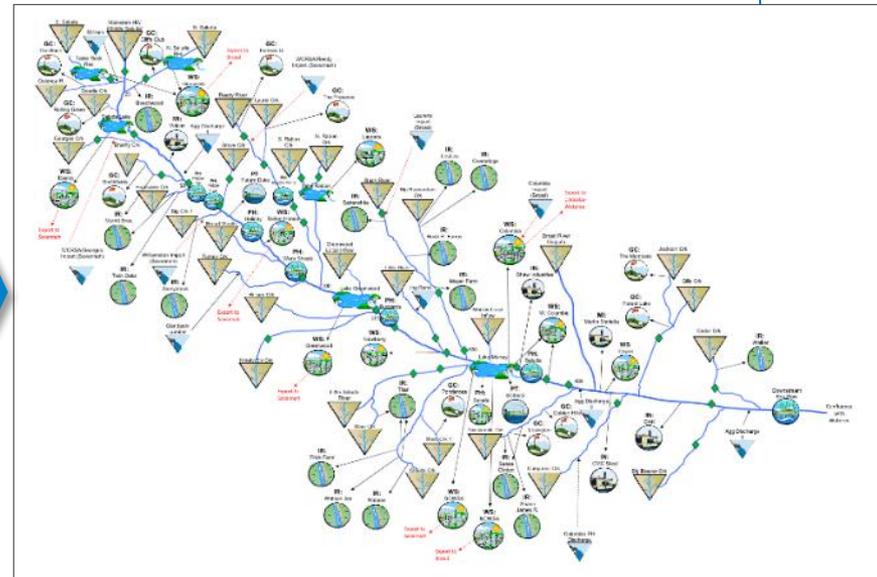

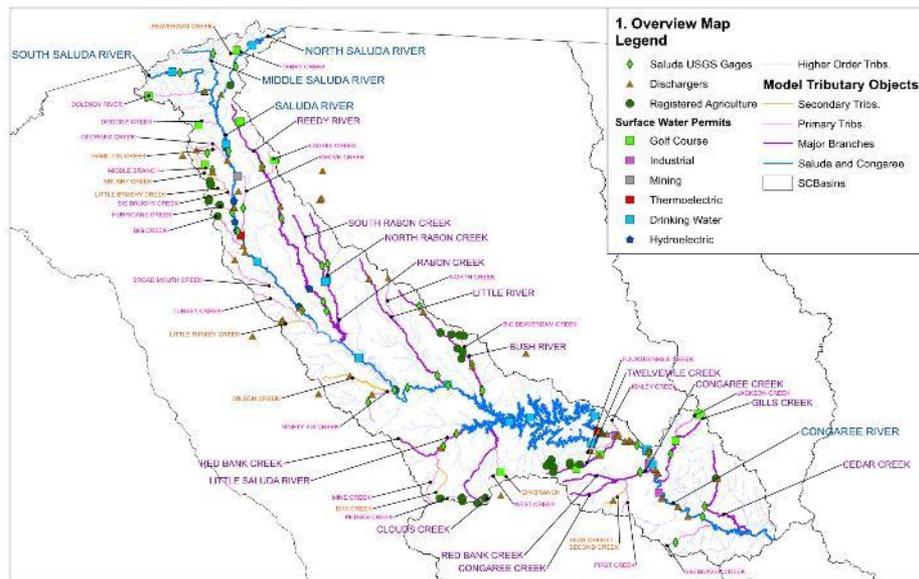

- UIF dataset will be extended into the Congaree River when Broad River UIFs are completed

Saluda Basin Unimpaired Flow Locations

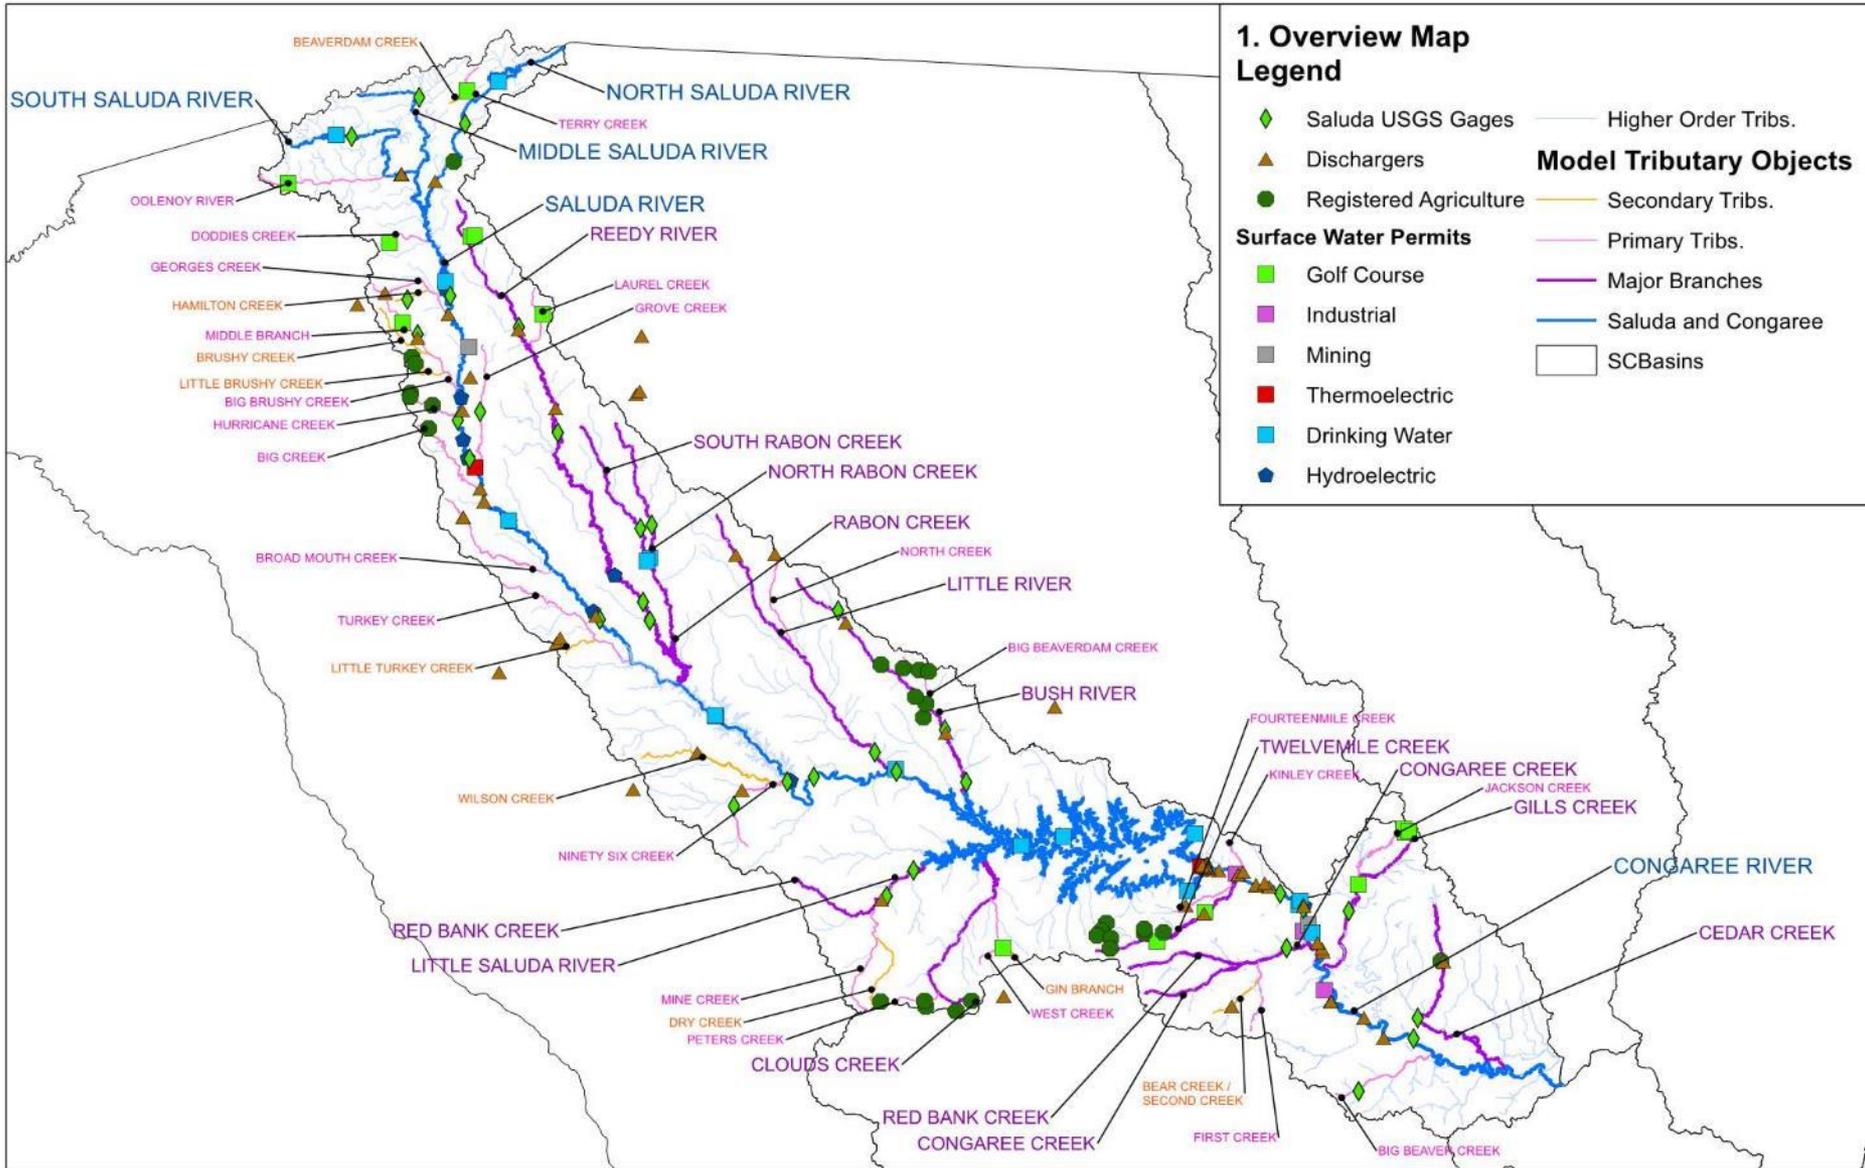

Saluda Basin Model Framework

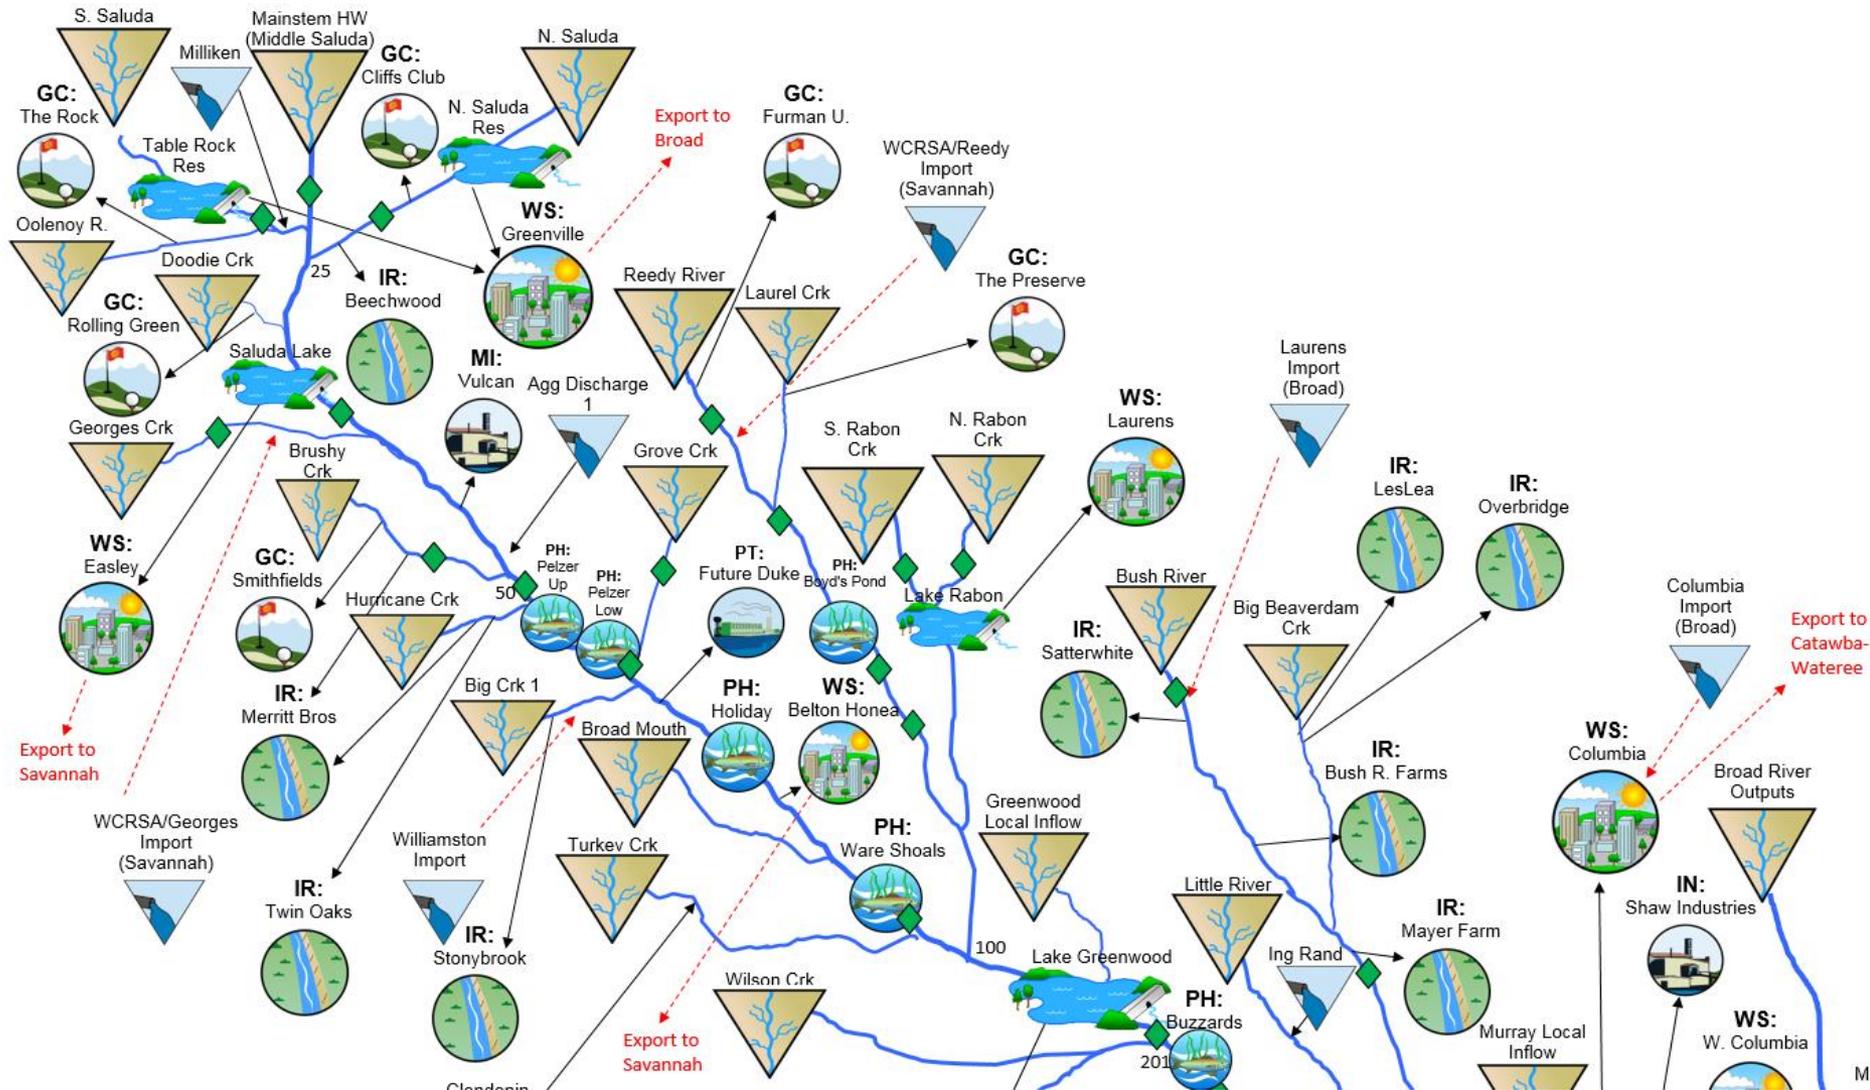

- Draft Model Framework has been prepared for the entire Saluda Basin

Saluda Basin Model Framework

Saluda Basin Model Framework

Presentation Outline

- Project Purpose, Overview and Schedule
- The Modeling Tool
- Saluda River Basin Unimpaired Flows and Pilot Model
- Stakeholder Involvement Opportunities

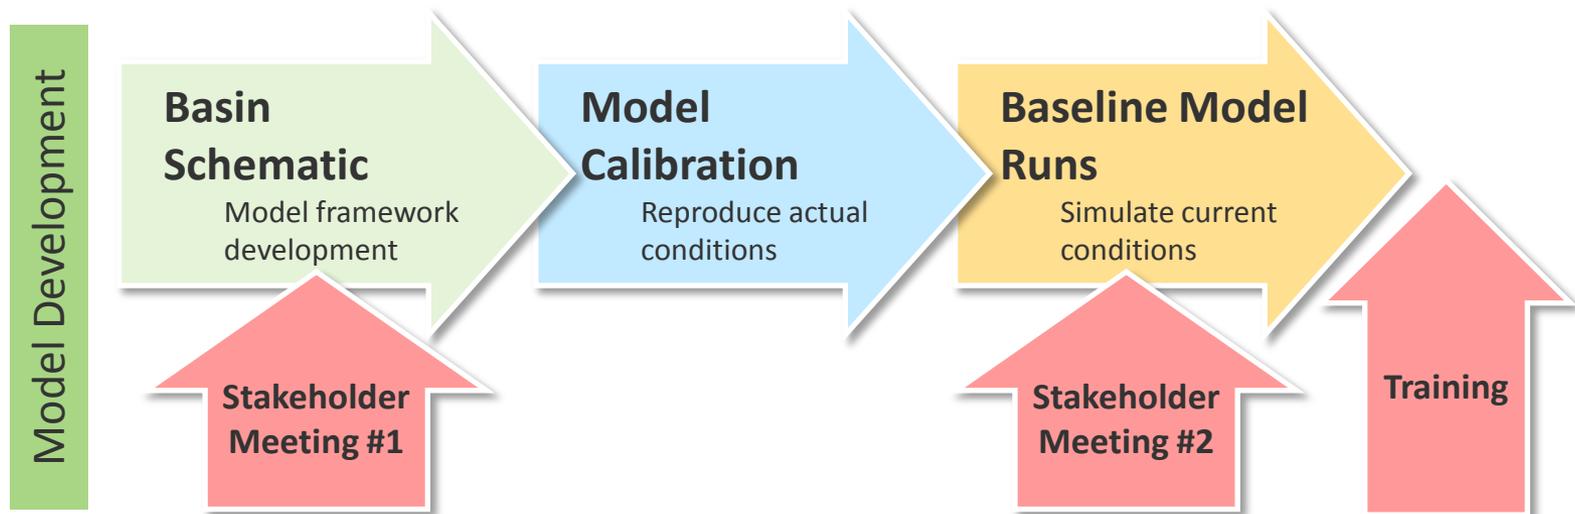

Stakeholder Involvement Opportunities

- Stakeholder engagement is being led by Clemson University
- Two meetings per basin are planned
- A webinar is being developed to provide an introduction to the project.

Stakeholder Involvement Opportunities

Project Overview (Webinar)

Stakeholder Involvement Opportunities

- **Meeting #1 - Review of Basin Framework (Workshop Format)**
 - Are all interests included in the framework?
 - Are all important tributaries being represented?
 - Are additional model nodes needed for environmental flows?
 - Are there significant data gaps which still need filling?
- **Saluda Basin Meeting #1**
 - Date/Time: Tuesday, April 21st, 2:00 - 4:00 pm
 - Location: Clemson ICAR
5 Research Drive, Greenville

Stakeholder Involvement Opportunities

- **Meeting #2 - Review of Unimpaired Flow Dataset and Baseline Model**
 - Review of UIF development and gap filling
 - Review of baseline model
 - Review of model calibration and verification results
 - Review of model uses and limitations
- **Training**
 - Training to interested parties will be provided for each basin model

Surface Water Modeling and Assessments

Effective water planning and management requires an accurate assessment of the location and quantity of the water resources of the State, and one of the most useful tools for evaluating management strategies is a computer model that simulates the surface water system throughout an entire watershed. To that end, SCDNR and SCDHEC have begun the process of developing surface-water quantity models for each of the [eight major watersheds](#), or basins, in South Carolina.

A more detailed discussion of the proposed surface water modeling can be found in the document [Basinwide Surface Water Modeling in South Carolina PDF](#), and an overview of each of the eight basins for which the models will be developed can be found in the document [Major Basins of South Carolina PDF](#).

In July 2014, CDM Smith, Inc. was awarded a contract to develop the models for the state.
